**AN ARTIFICIAL MOTHER.**—Mr. T. B. Rogers,  
the famous poultry-raiser at Wethersfield,  
has "sensed the precise thing," and has in-  
vented what he calls an "artificial mother" for  
the rearing of young chickens. He estimates  
that at least fifty per cent. of chickens hatched  
are lost by suffering from cold, by being steeped  
on by their mother, or cats and other ani-  
mals, and in various other ways. He also finds  
that chickens, to be profitable, should be hatched  
in the winter. He has hatched three  
broods in nine weeks with one hen—that is, he  
takes away the chickens as soon as hatched  
and places fresh eggs under the hen, and in  
this way keeps her busy propagating chickens.  
Mr. Rogers' next move was to get up some in-  
vention that would take care of the chickens  
when hatched, and he constructed what he  
calls an "artificial mother." This is a box  
with two compartments, and about three feet  
long by two feet and a half wide. In the rear  
is a lid covered with wool, which shuts within  
three inches of the bottom; this is cut off from  
the front part by a strip that can be raised on  
hinges. The front is protected by lattice-work,  
giving plenty of air and light, and on the out-  
side are two troughs, in which gravel, food and  
water are placed. The chickens can easily get  
their bills into these, and when they have got  
their fill they can run under the wool-covered  
lid, which is so soft and comfortable that they  
imagine they are under the old hen's wings.  
Mr. Rogers had in one of these boxes yester-  
day a brood of twenty-one chickens, sixteen of  
which were hatched last Thursday, and five on  
Sunday. They were all as lively as crickets,  
and seemed perfectly at ease. He took them  
to the Springfield poultry show on the noon  
train, where they undoubtedly attract a  
good deal of attention. Mr. Rogers deals ex-  
clusively in light Brahmas, and thinks they are  
the best layers as well as the most profitable  
fowls for the table.—*Harford Courant.*
